RE: Application for the Data Capturer Position

Dear Hiring Manager,

I am writing to apply for the Data Capturer position at City of Windhoek. I'm a graduate from the Namibia University of Science and Technology, where I studied Software Development and completed a stream in Data Analytics. I'm excited about the chance to work with data in a way that helps the municipality run smoother and serve people better.

During my studies, I worked with tools such as Python, Anaconda, Jupyter Notebooks, Excell, and MySQL, and also gained experience using APIs with PHP. I learned how to clean, organize, and analyse data using real-world datasets. This included removing duplicates, handling missing values, correcting data types, normalising formats, detecting outliers, and filtering irrelevant information. I also applied common data science techniques such as data wrangling, exploratory data analysis, and basic modelling.

In addition, I have built web-based projects using HTML, CSS, JavaScript, PHP, React, Tailwind CSS, and MySQL, giving me a strong understanding of how data flows through applications. Through internships, I gained practical workplace experience, collaborating in teams, meeting deadlines, and developing strong time management skills, which make me confident in working within diverse teams.

I'm interested in working with the City of Windhoek because it plays such an important role in helping the community. I'd like to use my data skills to help keep records accurate and make sure the work run more smoothly. I also see it as a great place for me to learn and grow while contributing to something that directly benefits people in our city.

Thank you for considering my application. I look forward to the possibility of discussing how my background and skills can add value to City of Windhoek, and I am available at your convenience for an interview.

Yours sincerely,

Tjitouua Mapoha

(PS: I couldn't upload my whole CV because it's larger than 1 MB, and that's the size limit)
