RE: Application for the System Support Analyst Position

Human Resources
University of Namibia
Main Campus

Dear Hiring Team,

I'm writing to apply for the System Support Analyst position. I hold a Bachelor's Degree in Computer Science (Software Development), and I have experience in supporting users and maintaining systems in my previous roles.

In my recent internship at the Office of the Prime Minister, I worked on web-based systems and I was involved in planning, development, testing and maintenance. This helped me understand how important it is to keep systems stable and reliable for users, especially when it comes to keeping systems running smoothly and helping users when issues come up.

I also have experience working directly with users and clients, gathering requirements and making improvements based on feedback. I'm comfortable supporting users, testing system updates and making sure new changes work properly before they go live. Working with databases and data handling has also really helped me understand how important accurate information is for decision-making.

I enjoy solving system-related issues and making processes better where possible. I communicate clearly, I'm easy to work with and I always try to make sure tasks are completed properly. I'm also open to learning new systems and technologies whenever needed.

I would like to work at UNAM because it directly impacts students and their academic journey. Systems like student records and registrations play a big role in students' daily lives, and I would like to be part of the team that keeps those systems running smoothly. Supporting systems that help students study, register and access information will make the work more meaningful to me.

Thank you for considering my application. I look forward to hearing from you and hopefully discussing the opportunity further.

Kind regards,
Tjitouua Mapoha
