RE: Application for the Data Analyst Support Position

Dear Hiring Manager,

I'm writing to apply for the Data Analyst Support position at Choppies. I'm a graduate from the Namibia University of Science and Technology, where I studied Software Development and completed a stream in Data Analytics. I'm very interested in this role because it connects two things I enjoy, which is working with data and contributing to a busy, people-focused environment like a supermarket.

I've worked with tools such as Python, Anaconda, Jupyter Notebooks, Excel, and MySQL, and have experience using APIs with PHP. I know how to clean, organize, and analyse data, including checking for errors, removing duplicates, and formatting information properly. I've also learned how to prepare clear, structured reports that make data easy to understand and use.

Through my studies and internship experience, I've developed good attention to detail, problem-solving, and time management skills. I'm also very comfortable working with numbers, spotting patterns, and ensuring information is accurate before sharing it. I believe these skills fit well with the responsibilities listed, especially in collecting data, reviewing store performance, and preparing reports on time.

I'm interested in working at Choppies because it's one of the biggest and most trusted supermarkets in Namibia, and I'd like to be part of something that directly supports the community. I enjoy busy, team-based environments and see this role as a great opportunity to learn, grow, and make a practical difference through my work.

Thank you for considering my application. I look forward to the chance to discuss how my background and skills can support Choppies' operations and reporting goals.

Yours sincerely,

Tjitouua Mapoha
